

Web app, also we need to embed in fb

We need to develop a server and backend when we can admin the activity

- Admin creation / edit / delete
- Import database from xls or cvs file
- In database will be the NIC (Main id), Cedula (user social number), points (user points)
- The user can accumulate points by playing the game
- The back end will let admin export data via xls or cvs
- The app should run on a linux server and have
- The demand protection will be 50.000 user / days

Web app, also we need to embed in fb:

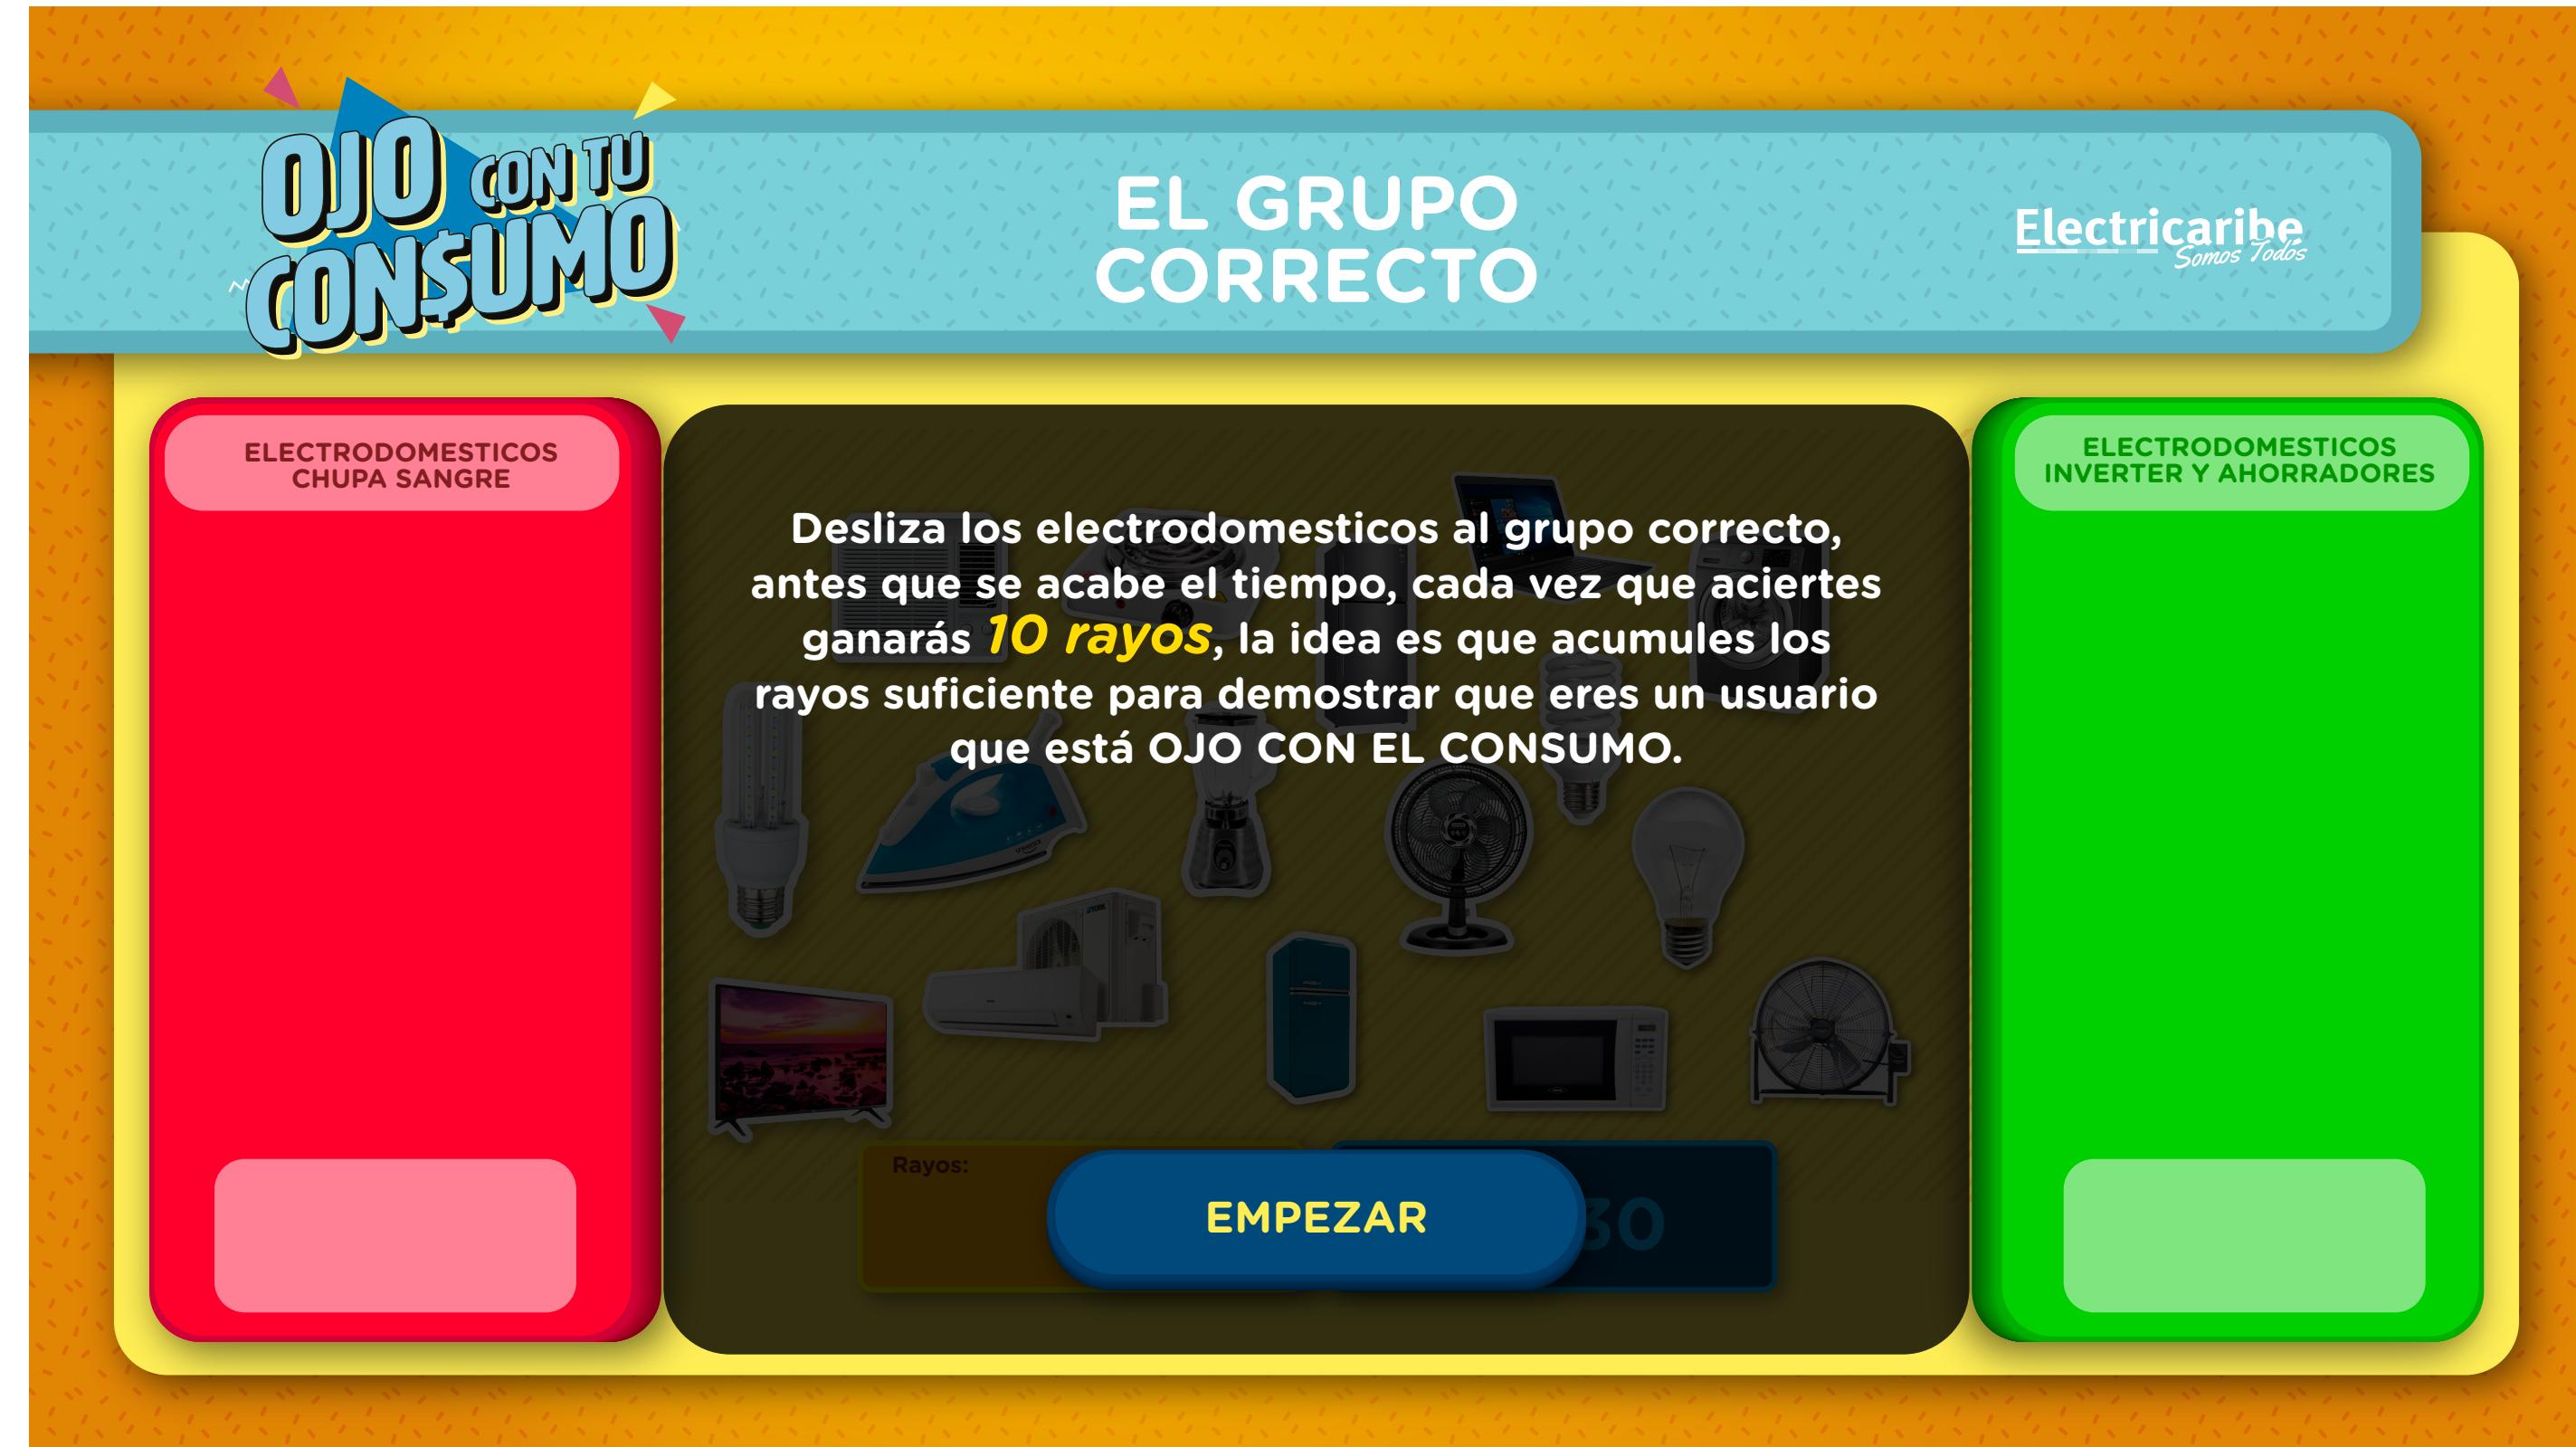

We are going to ask user input NIC and Cédula if the user its in the database registered in the backend then we let user play
